

AVIARY REARING COMPACT BATTERY

Aviary rearing battery SKK - A with manure belt removal

Efficient, chick and farmer friendly

Third tier
In the sixth week – depending on the individual conditions – system is full opened. The pullets learn to move around on all levels in open space.

Second (start) tier - central level
The day-old chicks are moved into the aviary.

First tier
To allow for more freedom of movement, 50 % of the birds can be transferred to the lower level after approximately 14 days.

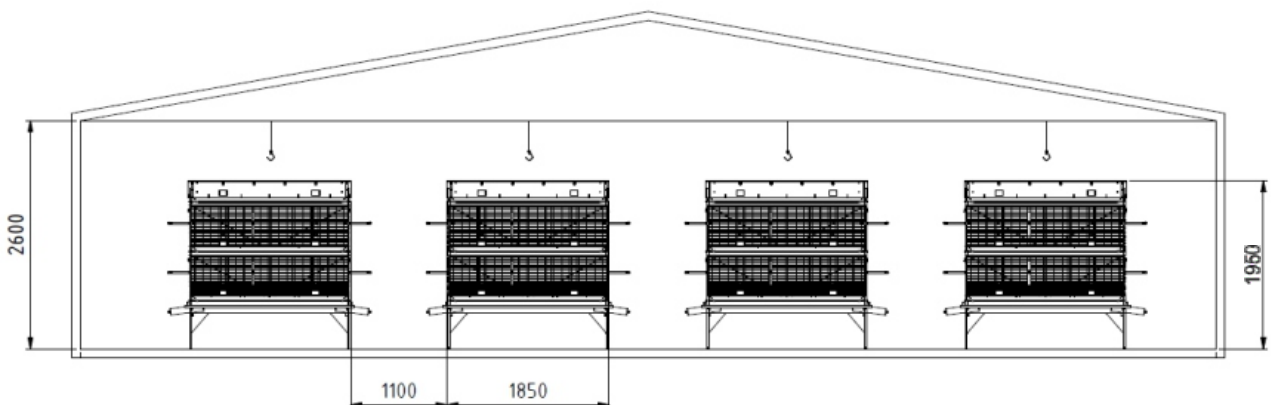

Aviary rearing compact battery

Technical data

Battery dimensions	
Height	195 cm
Width	185 cm
Module length	240 cm

- Multilevel technological equipment for aviary rearing from one day old chick.
- Number of rows and length according to customer requirement.
- Manufactured from galvanized wires and galvanized sheets.
- Feed delivery with feeding chain.
- Watering lines with nipples and mini water troughs for one day old chicks.
- Adjustable high of watering according to age of birds.
